PROFILE

Applied AI & Backend Engineer with experience building AI-assisted testing workflows, integrating pretrained models, and deploying applications to the cloud. Combines model integration and evaluation with backend development to deliver practical tools across financial operations, software quality and accessible learning.

TECHNICAL SKILLS

Languages and backend: Python, TypeScript, JavaScript, C#, Node.js, Express, NestJS, FastAPI, ASP.NET Core, REST APIs

AI and testing: Model integration, AI agents, semantic search, embeddings, SignCLIP, Gemini, Claude, NVIDIA NIM, Whisper, Playwright, pytest, Jest

Data and cloud: PostgreSQL, SQL Server, MongoDB, Redis, Pandas, AWS, Azure, Docker, Terraform, GitHub Actions, Linux

PROFESSIONAL EXPERIENCE

AI Engineer | VettedAI (VFAxAPP)

Remote | Jan 2026 - Present

- Developed AI-assisted QA workflows that turn testing guides into executable browser checks, using generated test scripts and a browser-action agent.
- Integrated Playwright and model providers with reusable authenticated sessions, staging fixtures, bounded execution and structured test reports.
- Implemented comparisons against saved baseline results and webhook-driven GitHub Actions workflows to support repeatable regression checks.

Software Developer | Greenwich Registrars and Data Solutions

Sep 2025 - Present

- Built a Python/Pandas reconciliation tool used by the finance department, generating reports in under five minutes for work previously performed manually over two to four hours, followed by light review and confirmation.
- Implemented a desktop workflow covering data validation, netting, matching and Excel reporting, with background processing and progress feedback.
- Developed a .NET Blazor meetings application with outbox-pattern notifications and Excel reports, and an ASP.NET Core staff-training platform with completion tracking and audit logs.

Backend Engineer | ArchSaint Nexus

Remote | Jan 2026 - Aug 2026

Pickup Logistics | github.com/wizzfi1/pick-up-api

- Built TypeScript/Node.js logistics APIs for shipment lifecycle management, real-time tracking and event-driven notifications.
- Implemented JWT authentication, role-based access control and Redis-backed OTP verification; separated email processing from API requests using BullMQ workers.

Channel Associate | Sterling Bank

Lagos, Nigeria | May 2023 - Oct 2025

- Processed approximately 100 daily banking transactions and coordinated with technical teams on system issues, building practical experience in financial operations and data integrity.

SELECTED PROJECTS

AweKik | AI Engineering Lead, Team Project

Python, SignCLIP, Gemini, TypeScript, AWS Lightsail and CloudFront

- Owned AI engineering for an accessible maths-learning prototype, integrating pretrained SignCLIP inference into signing-video processing and comparison workflows.
- Implemented checkpoint verification, validated 768-dimensional embeddings and recorded preprocessing provenance to make model outputs traceable.
- Worked on making the avatar reproduce signing movements and coordinate gesture sequences with lesson playback; integrated constrained Gemini planning with local content checks.
- Built an AI-assisted audit workflow covering 50 signing recordings, identifying transcript-alignment and motion-tracking defects to guide dataset preparation.
- Deployed the integrated prototype to AWS Lightsail and CloudFront, handled application updates and preserved backups before retiring the demonstration infrastructure.

WIYANOS | Backend Lead, Team Project

FastAPI, Ahnlich, Claude, Whisper, PostgreSQL, Redis, AWS | Jul - Aug 2026

- Led backend development for a service-discovery platform, combining semantic retrieval, language normalization and geographic ranking to return relevant providers.
- Integrated Claude query normalization, Ahnlich vector search and Whisper voice transcription; combined semantic similarity with geographic proximity for result ranking.
- Implemented Redis query caching and PostgreSQL persistence, with containerized deployment using AWS EC2/ECR, Terraform and GitHub Actions.

FailureLab | Backend Reliability Project

TypeScript, Express, React, SQLite, automated testing

github.com/wizzfi1/failurelab

- Built a payment-webhook reliability demonstrator covering duplicate delivery, delayed events and interrupted processing, comparing vulnerable and corrected implementations.
- Implemented transactional payment and job persistence, idempotent fulfillment and recovery workers; verified outcomes against persisted records with 11 passing backend tests.

EDUCATION

Bachelor of Engineering in Computer Engineering

Federal University of Technology, Minna

SELECTED CERTIFICATIONS

Microsoft Certified: DevOps Engineer Expert | 2026

Microsoft Certified: Azure AI Engineer Associate | 2026

Microsoft Certified: Identity and Access Administrator Associate | 2026

Microsoft Certified: Azure Developer Associate | 2025

Kubernetes and Cloud Native Associate (KCNA) | 2025
