AI & BACKEND ENGINEER

Node.js | TypeScript | Python | AI Agents | Express | NestJS | PostgreSQL | MongoDB | Redis | Docker | Kubernetes | REST APIs | CI/CD | GitHub Actions

PROFESSIONAL SUMMARY

AI and backend engineer with hands-on experience building agent-native systems, production-ready APIs, and distributed infrastructure using Node.js, TypeScript, and Python. Currently contributing to AI agent workflows and evaluation pipelines at VettedAI (VFaxAPP). Proven ability to design reliable backend systems with clear data models, enforce business logic correctness, and deploy scalable microservices using Docker and Kubernetes. Pairs strong backend fundamentals with a DevOps background in cloud infrastructure, CI/CD automation, and observability to deliver sustainable, production-grade platforms.

WORK EXPERIENCE

VettedAI (VFaxAPP) – Remote

Jan 2026 – Present

[VettedAI](#)

AI Engineer

- Built autonomous QA agent system using Playwright, Gemini multimodal, and NVIDIA NIM to run end-to-end UI tests on any web product without manual scripting
- Engineered dual-pipeline architecture: a code-generation QA pipeline that writes and runs tests from product specs, and a UI/UX agent pipeline that evaluates visual and interaction quality
- Implemented 6 named browser sessions with a golden replay harness for regression detection by replaying recorded baselines against live builds
- Deployed event-driven testing via Render webhooks and GitHub Actions, triggering the QA agent on every pull request and surfacing failures as structured AI-generated reports

Greenwich Registrars and Data Solutions

Sep 2025 – Present

[Greenwich Registrars](#)

Software Developer

- Engineered the Recon Engine - a Python and Pandas multi-stage reconciliation pipeline (Load, Validate, Netting, Matching, Review, Write) with a distributable desktop GUI for internal finance teams
- Developed Greenwich.Meetings in .NET Blazor Server with clean architecture, outbox-pattern event notifications, and EPPlus-powered Excel report generation
- Built GRDS E-Learn, an ASP.NET Core MVC platform with SQL Server for tracking module completions, audit logging, and cookie-based authentication for staff training
- Engineered the Demat Memo System as a three-layer solution (WPF desktop, REST API, web portal tracker) integrating NGX/NASD market data APIs, PdfSharp for PDF generation, and a 60-minute in-memory price cache via ADO.NET and Dapper.

ArchSaint Nexus – Remote

Jan 2026 – Aug 2026

[Pickup Logistics](#)

Backend Engineer

- Built a production-ready logistics API with shipment lifecycle management, real-time tracking via WebSocket, and event-driven architecture using Node EventEmitter.
- Implemented JWT authentication, role-based access control (customer, business, admin, driver), and OTP verification backed by Redis for secure API access.
- Designed an async email queue with BullMQ and a dedicated worker process, decoupling notifications from the main request flow to improve API resilience.
- Enforced TypeScript strict mode throughout; covered business logic with Jest and MongoDB Memory Server and automated checks via GitHub Actions CI/CD.

Sterling Bank – Lagos, Nigeria

May 2023 – Oct 2025

[Sterling Bank](#)

Channel Associate

- Processed approx. 100+ daily transactions within core banking systems, developing a strong grounding in data integrity, auditability, and financial business logic.
- Liaised with IT and backend engineering teams to diagnose system issues, gaining direct exposure to production incident workflows and backend system behaviour under load.

NOTABLE PROJECTS

WIYANOS

Jul 2026 – Aug 2026

[Github Repo](#)

- Built semantic labour marketplace for Nigeria's informal economy: FastAPI backend, Ahnlich vector database with all-MiniLM-L6-v2 embeddings, and cosine similarity matching across Pidgin, Yoruba, Hausa, and Igbo queries
- Implemented full search pipeline with Claude Haiku query normalisation, 0.30 cosine similarity floor, and combined scoring blending 70% semantic similarity with 30% geographic proximity via Haversine distance
- Integrated OpenAI Whisper for multilingual voice search and Redis caching (5-minute TTL, SHA-256 keyed on normalised query and filters) to reduce redundant embedding calls
- Deployed on AWS EC2/ECR with PostgreSQL (Neon), Terraform infrastructure-as-code, GitHub Actions CI/CD, and Next.js frontend on Vercel
- Achieved sub-2-second average search latency and 90% job completion rate across multilingual queries in live pilot with informal-economy service providers

WizFi Microservices Platform

Jul 2025 – Sep 2025

[Github Repo](#)

- Architected and developed backend services for a microservices platform composed of 8+ independently deployable services.
- Designed REST APIs handling business logic, inter-service communication, and persistent data storage across Node.js and Python services.
- Implemented authentication, structured logging, and health checks to improve observability and production reliability.

Wisdom's Order Fellow

Jan 2026 – Mar 2026

[Github Repo](#)

- Designed and operated a production-ready backend platform for real-time order tracking using a secure webhook-driven architecture.
- Built a full onboarding workflow including registration, OTP verification, KYC submission, and admin approval gating.
- Modelled relational data with PostgreSQL and enforced strict order lifecycle transitions to maintain data integrity.

Full-Stack DevSecOps Demo

Sep 2025 – Oct 2025

[Github Repo](#)

- Developed backend APIs with structured error handling, input validation, and environment-based configuration.
- Integrated monitoring for request latency and error rates; ensured deployment readiness with CI/CD pipelines and automated testing.

Wisdom Job Board API

May 2025 – Jul 2025

[Github Repo](#)

- Developed a modular REST API with JWT-based authentication, role-based access control, and relational data models using Sequelize ORM.
- Prepared service for containerised deployment with Docker and production-ready health endpoints.

EDUCATION

Federal University of Technology, Minna

B.Eng. Computer Engineering

PROFESSIONAL SKILLS

- **Languages & Frameworks:** Python, JavaScript/TypeScript, C#, FastAPI, ASP.NET Core, Blazor Server, WPF, Next.js, Node.js, React
- **Databases & Messaging:** PostgreSQL, SQL Server, Redis, MongoDB, vector databases (Ahnlich, Pinecone), Neon
- **DevOps & Cloud:** AWS (EC2, ECR, SSM), Docker, GitHub Actions, Terraform, Vercel, Nginx, Linux
- **AI & Agent Systems:** Claude API, Gemini multimodal, NVIDIA NIM, OpenAI Whisper, Playwright automation, semantic search, multimodal AI agents, Ahnlich vector DB

CERTIFICATIONS

- Microsoft Certified: Azure AI Engineer Associate (2026)
- Microsoft Certified: Identity and Access Administrator Associate (2026)
- Microsoft Certified: Azure Developer Associate (2025)
- Kubernetes and Cloud Native Associate – KCNA (2025)
- Microsoft Certified: Azure AI Fundamentals (2025)

- Microsoft Certified: Azure Fundamentals (2025)
 - GitHub Foundations (2025)
 - Foundational C# with Microsoft (2025)
-

LANGUAGE COMPETENCIES

- English: Fluent (speaking, reading, writing)
